TALENTS

# Abstract

## Lean Spring Boot Applications for The Cloud

With the starters, Spring-Boot offers a functionality that allows you to set up a new software project with little effort and start programming right away. You don't have to worry about the dependencies since the "right" ones are already pre-configured. But how can you, for example, optimize the start-up times and reduce the memory footprint and thus better prepare the application for the cloud?

In this talk, we will go into Spring-Boot features like "spring-context-indexer", classpath exclusions, lazy spring beans, actuator, JMX. In addition, we also look at switching to a different JVM and other tools.

Let's make Spring Boot great again!

# Lean Spring Boot

## Applications for The Cloud

# Introduction

## Patrick Baumgartner

Technical Agile Coach @ 42talents

My focus is on the development of software solutions with humans.

Coaching, Architecture, Development, Reviews, and Training.

Lecturer @ Zürcher Fachhochschule für Angewandte Wissenschaften ZHAW

[@patbaumgartner](#)

**What is the problem?**

**Why this talk?**

**JAVA 🤔 & Spring Boot ❤️**

# Requirements

## When Choosing a Cloud

- How many vCPUs per server are required for my application?
- How much RAM do I need?
- How much storage is necessary?
- Which technology stack should I use?

# Considerations

## Resources

- CPU & RAM not linearly scalable
- Image Size & Network Bandwidth

## Scalability

- Fast Startup
- Graceful Shutdown
- Throughput
- Latency

# Agenda

# Agenda

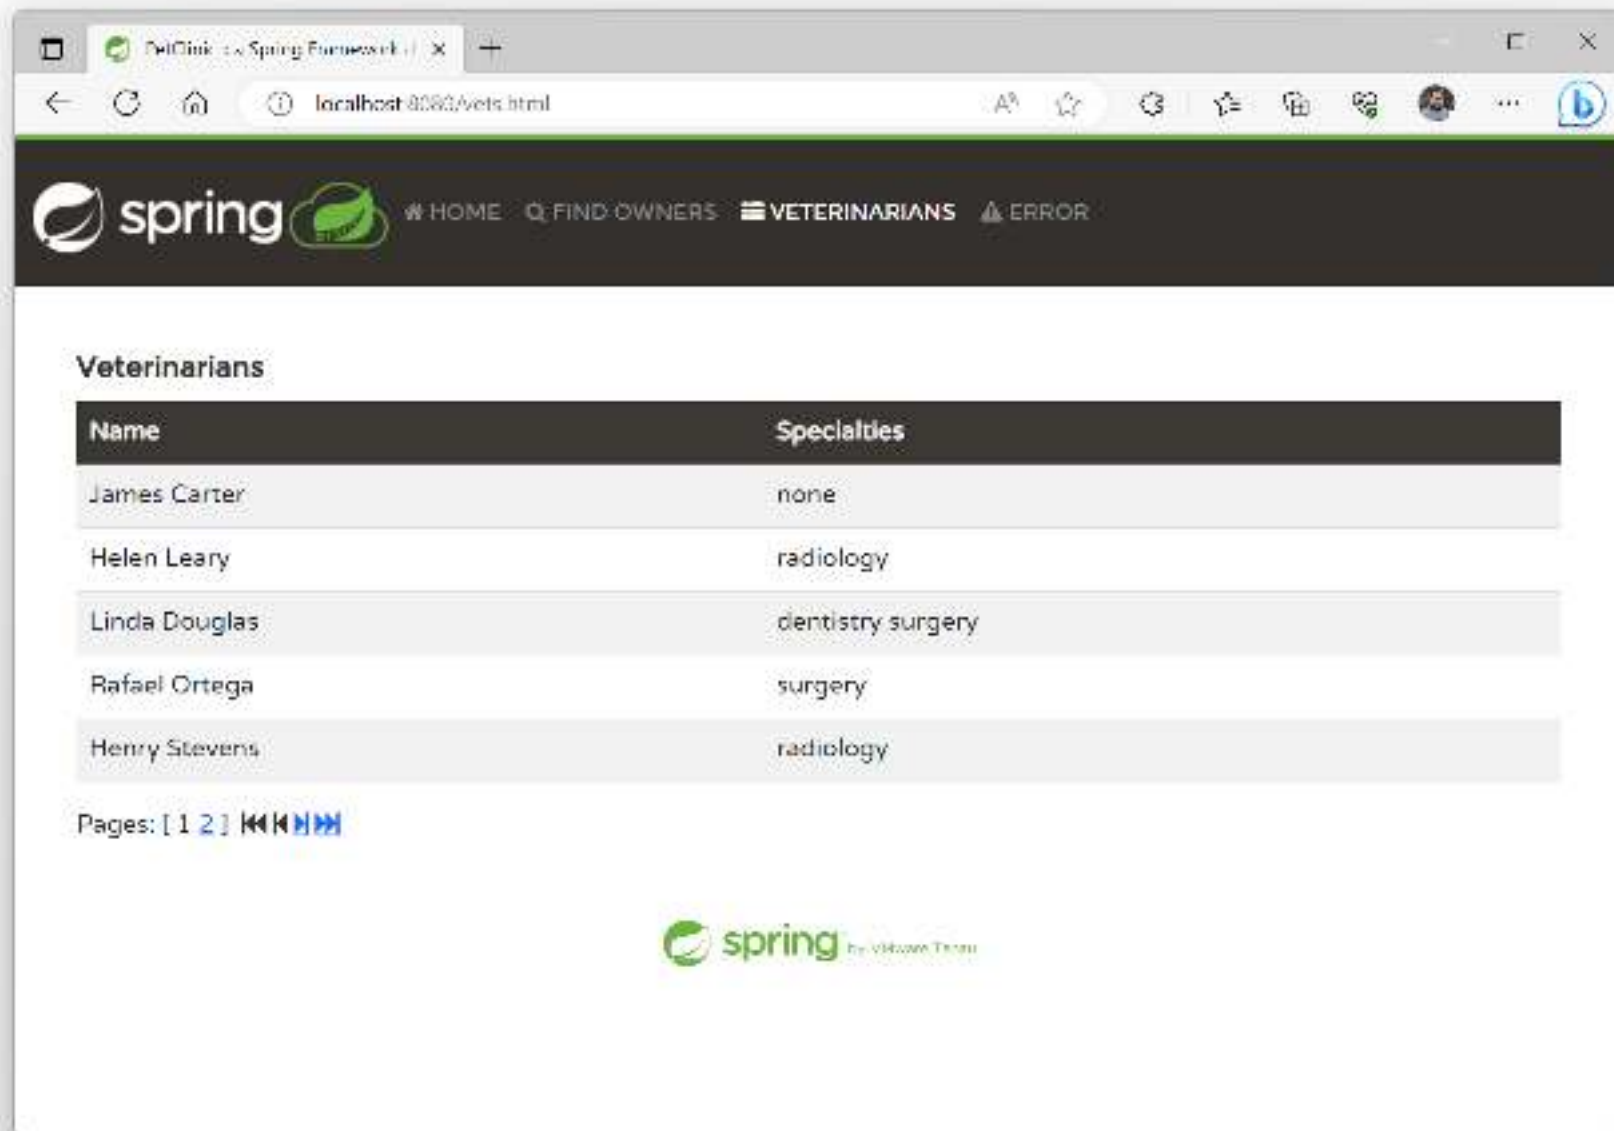

---

- Spring PetClinic & Baseline for Comparison
- Java Optimizations
- Spring Boot Optimizations
- Application Optimizations
- Other Runtimes
- Conclusions
- A Few Simple Optimizations Applied (OpenJDK Example)

# Spring Petclinic Community

---

- spring-framework-petclinic
- spring-petclinic-angular(js)
- spring-petclinic-rest
- spring-petclinic-graphql
- spring-petclinic-microservices
- spring-petclinic-data-jdbc
- spring-petclinic-cloud
- spring-petclinic-mustache
- spring-petclinic-kotlin
- spring-petclinic-reactive
- spring-petclinic-hilla
- spring-petclinic-angularjs
- spring-petclinic-vaadin-flow
- spring-petclinic-reactjs
- spring-petclinic-htmx
- spring-petclinic-istio
- ...

# NO!

The official **Spring PetClinic!**   

Which is based on **Spring Boot**, Caffeine,  
Thymeleaf, **Spring Data JPA**, H2 and  
**Spring MVC** ...

# Optimizing Experiments

# Baseline

---

## Technology Stack

- OCI Container made with Buildpacks
- Java JDK 17 LTS
- Spring Boot 3.1.5
- DB Migration with SQL Scripts

## Examination

- Build Time
- Startup Time
- Resource Usage
- Container Image Size
- Throughput

- Bellsoft Liberica JDK 21.0.0
- Java Memory Calculator

```
sdk use java 21-librca
```

```
mvn -Djava.version=21 spring-boot:build-image \  
    -Dspring-boot.build-image.imageName=spring-petclinic:3.1.5-SNAPSHOT-jdk20
```

```
docker run -p 8080:8080 -t spring-petclinic:3.1.5-SNAPSHOT-jdk20
```

Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
 56s	316MB	3.921s	278MB	1995/s	449MB	6ms	10ms	15ms	42ms	95ms	138ms
64s	368MB	4.013s	276MB	1996/s	464MB	6ms	11ms	17ms	44ms	85ms	133ms

# -XX:TieredStopAtLevel=1

---

The tiered compilation is enabled by default since Java 8. Unless explicitly specified, the JVM decides which JIT compiler to use based on our CPU. For multi-core processors or 64-bit VMs, the JVM will select C2.

To disable C2 and only use the C1 compiler with no profiling overhead, we can apply the `-XX:TieredStopAtLevel=1` parameter.

```
docker run -p 8080:8080 -e "JAVA_TOOL_OPTIONS=-XX:TieredStopAtLevel=1" \
-t spring-petclinic:3.1.5-SNAPSHOT
```

*It will slow down the JIT later at the expense of the saved startup time!*

Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
 56s	316MB	3.921s	278MB	1995/s	449MB	6ms	10ms	15ms	42ms	95ms	138ms
-	-	3.439s	201MB	1415/s	320MB	10.0s	13.7s	16.1s	19.1s	20.7s	21.7s

# Lazy Spring Beans (1)

---

Configure lazy initialization across the whole application. A Spring Boot property makes all Beans lazy by default and only initializes them when they are needed. `@Lazy` can be used to override this behavior with e.g. `@Lazy(false)`.

```
docker run -p 8080:8080 \
  -e spring.main.lazy-initialization=true \
  -e spring.data.jpa.repositories.bootstrap-mode=lazy \
  -t spring-petclinic:3.1.5-SNAPSHOT
```

Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
 56s	316MB	3.921s	278MB	1995/s	449MB	6ms	10ms	15ms	42ms	95ms	138ms
-	-	2.202s	242MB	1997/s	447MB	8ms	13ms	21ms	50ms	94ms	147ms

# Lazy Spring Beans (2)

---

## Pros

- Faster startup useful in cloud environments
- Application startup is a CPU-intensive task. Spreading the load over time

## Cons

- The initial requests may take more time
- Class loading issues and misconfigurations unnoticed at startup
- Beans creation errors only be found at the time of loading the bean

# No Spring Boot Actuators

---

Don't use actuators if you can afford not to. 😊

- No. of Spring Beans
  - Spring Pet Clinic with Actuators: 415
  - Spring Pet Clinic no Actuators: 270 🔥

```
sdk use java 17.0.8-librca
```

```
mvn spring-boot:build-image
```

```
docker run -p 8080:8080 -t spring-petclinic-no-actuator:3.1.5-SNAPSHOT
```

Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
🕒 56s	316MB	3.921s	278MB	1995/s	449MB	6ms	10ms	15ms	42ms	95ms	138ms
53s	313MB	3.504s	263MB	1995/s	427MB	7ms	12ms	19ms	46ms	94ms	135ms

# Fixing Spring Boot Config Location

---

Fix the location of the Spring Boot config file(s).

Considered in the following order (`application.properties` and YAML variants):

- Application properties packaged inside your jar
- Profile-specific application properties packaged inside your jar
- Application properties outside of your packaged jar
- Profile-specific application properties outside of your packaged jar

```
docker run -p 8080:8080 -e spring.config.location=classpath:application.properties \
-t spring-petclinic:3.1.5-SNAPSHOT
```

Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
 56s	316MB	3.921s	278MB	1995/s	449MB	6ms	10ms	15ms	42ms	95ms	138ms
-	-	3.961s	288MB	1994/s	450MB	9ms	15ms	22ms	54ms	109ms	160ms

# Disabling JMX

---

JMX is `spring.jmx.enabled=false` by default in Spring Boot since 2.2.0 and later. Setting `BPL_JMX_ENABLED=true` and `BPL_JMX_PORT=9999` on the container will add the following arguments to the `java` command.

```
-Djava.rmi.server.hostname=127.0.0.1  
-Dcom.sun.management.jmxremote.authenticate=false  
-Dcom.sun.management.jmxremote.ssl=false  
-Dcom.sun.management.jmxremote.port=9999  
-Dcom.sun.management.jmxremote.rmi.port=9999
```

```
docker run -p 8080:8080 -p 9999:9999 \  
  -e BPL_JMX_ENABLED=false \  
  -e BPL_JMX_PORT=9999 \  
  -e spring.jmx.enabled=false \  
  -t spring-petclinic:3.1.5-SNAPSHOT
```

# **Spring Boot & Buildpacks**

# Dependency Cleanup (2)

---

DepClean detects and removes all the unused dependencies declared in the `pom.xml` file of a project or imported from its parent. It does not touch the original `pom.xml` file.

```
<plugin>
  <groupId>se.kth.castor</groupId>
  <artifactId>depclean-maven-plugin</artifactId>
  <version>2.0.6</version>
  <executions>
    <execution>
      <goals>
        <goal>depclean</goal>
      </goals>
    </execution>
  </executions>
</plugin>
```

```
mvn se.kth.castor:depclean-maven-plugin:2.0.6:depclean -DfailIfUnusedDirect=true -DignoreScopes=provided,test,runtime,system,import
```

```

# Dependency Cleanup (2)

But there are some challenges:

- Spring uses reflection to load classes
- Spring Boot uses `META-INF/spring-boot/org.springframework.boot.autoconfigure.AutoConfiguration` to load classes
- Spring Context Indexer uses `META-INF/spring.components`
- Component & Entity Scanning through Classpath Scanning

```
sdk use java 17.0.8-librca
mvn spring-boot:build-image
docker run -p 8080:8080 -t spring-petclinic-depclean:3.1.5-SNAPSHOT
```

Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
 56s	316MB	3.921s	278MB	1995/s	449MB	6ms	10ms	15ms	42ms	95ms	138ms
63s	307MB	3.335s	245MB	1991/s	415MB	6ms	12ms	18ms	40ms	84ms	128ms

# Ahead-of-Time Processing (AOT) (1)

---

Spring AOT is a process that analyzes your application at build-time and generates an optimized version of it.

As the BeanFactory is fully prepared at build-time, conditions are also evaluated.

```
<plugin>
  <groupId>org.springframework.boot</groupId>
  <artifactId>spring-boot-maven-plugin</artifactId>
  <executions>
    <execution>
      <id>process-aot</id>
      <goals>
        <goal>process-aot</goal>
      </goals>
    </execution>
  </executions>
</plugin>
```

# Ahead-of-Time Processing (AOT) (2)

---

We are creating a new container image with the AOT-processed application.

```
sdk use java 17.0.8-librca  
mvn spring-boot:build-image  
docker run -e spring.aot.enabled=true -p 8080:8080 -t spring-petclinic-aot:3.1.5-SNAPSHOT
```

Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
 56s	316MB	3.921s	278MB	1995/s	449MB	6ms	10ms	15ms	42ms	95ms	138ms
59s	317MB	3.998s	293MB	1995/s	453MB	8ms	14ms	21ms	50ms	99ms	156ms

# JLink (1)

---

Jlink assembles and optimizes a set of modules and their dependencies into a custom runtime image for your application.

```
$ jlink \  
  --add-modules java.base, ... \  
  --strip-debug \  
  --no-man-pages \  
  --no-header-files \  
  --compress=2 \  
  --output /javaruntime
```

```
$ /javaruntime/bin/java HelloWorld  
Hello, World!
```

# JLink (2)

```
<plugin>
  <groupId>org.springframework.boot</groupId>
  <artifactId>spring-boot-maven-plugin</artifactId>
  <configuration>
    <image>
      <env>
        <BP_JVM_JLINK_ENABLED>true</BP_JVM_JLINK_ENABLED>
      </env>
    </image>
  </configuration>
</plugin>
```

	Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
sdk	 56s	316MB	3.921s	278MB	1995/s	449MB	6ms	10ms	15ms	42ms	95ms	138ms

# **Spring Boot 🌿 & Buildpacks**

## Unleash the power of Java

Optimized to run Java™ applications cost-effectively in the cloud, Eclipse OpenJ9™ is a fast and efficient JVM that delivers power and performance when you need it most.

**Optimized for the Cloud**  
for microservices and monoliths  
too!

**42% Faster Startup**  
over HotSpot

**28% Faster Ramp-up**  
when deployed to cloud vs HotSpot

**66% Smaller**  
when compared to HotSpot

# Eclipse OpenJ9

```
<plugin>
  <groupId>org.springframework.boot</groupId>
  <artifactId>spring-boot-maven-plugin</artifactId>
  <configuration>
    <image>
      <buildpacks>
        <buildpack>gcr.io/paketo-buildpacks/eclipse-openj9:latest</buildpack>
        <!-- Used to inherit all the other buildpacks -->
        <buildpack>gcr.io/paketo-buildpacks/java:latest</buildpack>
      </buildpacks>
    </image>
  </configuration>
</plugin>
```

	Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
	 56s	316MB	3.921s	278MB	1995/s	449MB	6ms	10ms	15ms	42ms	95ms	138ms
sdk	75s	306MB	6.951s	164MB	1992/s	350MB	9ms	14ms	22ms	67ms	151ms	236ms

```
mvn spring-boot:build-image
```

```
docker run -p 8080:8080 -t spring-petclinic-custom-jvm-openj9:3.1.5-SNAPSHOT
```

# Eclipse OpenJ9 Optimized Virtualized

When `-Xtune:virtualized` is used in conjunction with the `-Xshareclasses` option, the JIT compiler is more aggressive with its use of AOT-compiled code compared to setting only `-Xshareclasses`. This action provides additional CPU savings during application start-up and ramp-up, but comes at the expense of an additional small loss in throughput.

```
docker run -p 8080:8080 -e "JAVA_TOOL_OPTIONS=-XX:+IgnoreUnrecognizedVMOptions -XX:+UseContainerSupport -XX:+IdleTuningCompactOnIdle -XX:+IdleTuningGcOnIdle -Xscmx50M -Xshareclasses -Xtune:virtualized" \
-t spring-petclinic-custom-jvm:3.1.5-SNAPSHOT
```

Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
 56s	316MB	3.921s	278MB	1995/s	449MB	6ms	10ms	15ms	42ms	95ms	138ms
75s	306MB	8.678s	199MB	1995/s	344MB	17ms	27ms	45ms	120ms	234ms	355ms

# GraalVM

```
<plugin>
  <groupId>org.springframework.boot</groupId>
  <artifactId>spring-boot-maven-plugin</artifactId>
  <configuration>
    <image>
      <buildpacks>
        <buildpack>gcr.io/paketo-buildpacks/graalvm:latest</buildpack>
        <!-- Used to inherit all the other buildpacks -->
        <buildpack>gcr.io/paketo-buildpacks/java:latest</buildpack>
      </buildpacks>
    </image>
  </configuration>
</plugin>
```

Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
 56s	316MB	3.921s	278MB	1995/s	449MB	6ms	10ms	15ms	42ms	95ms	138ms
76s	719MB	3.943s	251MB	1997/s	438MB	7ms	12ms	19ms	47ms	101ms	154ms

mvn spring-boot:build-image

docker run -p 8080:8080 -t spring-petclinic-custom-jvm-graalvm:3.1.5-SNAPSHOT

# Other Buildpack Builders

# Bellsoft Buildpack Builder

Bellsoft provides an optimized builder for Spring Boot applications. It uses the Bellsoft Alpaquita, Liberica JDK and the musl C library. A glibc version is also available.

```
<plugin>
  <groupId>org.springframework.boot</groupId>
  <artifactId>spring-boot-maven-plugin</artifactId>
  <configuration>
    <image>
      <builder>bellsoft/buildpacks.builder:musl</builder>
    </image>
  </configuration>
</plugin>
```

	Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
	 56s	316MB	3.921s	278MB	1995/s	449MB	6ms	10ms	15ms	42ms	95ms	138ms
sdk	57s	174MB	4.435s	248MB	1995/s	394MB	6ms	11ms	16ms	40ms	80ms	128ms

```
mvn spring-boot:build-image

docker run -p 8080:8080 -t spring-petclinic-bellsoft-buildpack:3.1.5-SNAPSHOT
```

# GraalVM Native Image

---

A native image is a technology to build Java code to a standalone executable. This executable includes the application classes, classes from its dependencies, runtime library classes, and statically linked native code from JDK. The JVM is packaged into the native image, so there's no need for any Java Runtime Environment at the target system, but the build artifact is platform-dependent.

```
mvn -Pnative spring-boot:build-image
```

```
docker run -p 8080:8080 -t spring-petclinic-native:3.1.5-SNAPSHOT
```

Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
 56s	316MB	3.921s	278MB	1995/s	449MB	6ms	10ms	15ms	42ms	95ms	138ms
330s	218MB	0.283s	234MB	1992/s	462MB	21ms	36ms	61ms	170ms	299ms	424ms

# CRaC - OpenJDK (1)

---

CRaC (Checkpoint and Restart in Java) is a feature that allows to checkpoint the state of a Java application and restart it from the checkpointed state.

*The application starts within milliseconds!*

# CRaC - OpenJDK (2)

---

```
export JAVA_HOME=/opt/openjdk-17-crac+5_linux-x64/  
export PATH=$JAVA_HOME/bin:$PATH
```

```
mvn clean verify
```

```
java -XX:CRaCCheckpointTo=crac-files -jar target/spring-petclinic-crac-3.1.5.jar
```

```
jcmd target/spring-petclinic-crac-3.1.5.jar JDK.checkpoint
```

```
java -XX:CRaCRestoreFrom=crac-files
```

# CRaC - OpenJDK (3)

---

CRaC is currently in an experimental state and has the following limitations:

- Works with Spring Boot 3.0 & 3.1
  - Patched Tomcat 10.1.7 is available
- Support for Spring Boot 3.2 is in progress
  - Spring Framework 6.1.0-SNAPSHOT
- Does not work on Windows or on macOS
  - Does not work in Docker containers via WSL (yet)
- But works in VM with Ubuntu 22.04 LTS

Other JVM Vendors have similar features e.g. OpenJ9 with CRIU support.

# Virtual Threads

---

A thread is the smallest unit of processing that can be scheduled. It runs concurrently with — and largely independently of — other such units. It's an instance of `java.lang.Thread`. There are two kinds of threads, platform threads and virtual threads.

```
sdk use java 21-librca  
  
mvn spring-boot:build-image  
  
docker run -e spring.threads.virtual.enabled=true \  
-p 8080:8080 -t spring-petclinic-virtual-threads:3.1.5-SNAPSHOT
```

Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
 56s	316MB	3.921s	278MB	1995/s	449MB	6ms	10ms	15ms	42ms	95ms	138ms
64s	368MB	4.784s	306MB	1997/s	453MB	5ms	9ms	11ms	29ms	60ms	101ms

# Summary

# Summary

---

- No Optimizations with JDK 17 & JDK 21
- JVM Tuning
- Lazy Spring Beans
- No Spring Boot Actuators
- Fix Spring Boot Config Location
- Disabling JMX
- Dependency Cleanup
- Ahead-of-Time Processing (AOT)
- JLink
- Other JVMs (Eclipse OpenJ9, GraalVM, OpenJDK with CRaC)
- GraalVM Native Image

# Conclusions

# Conclusions (1)

## CPUs

---

- Your application might not need a full CPU at runtime
- It will need multiple CPUs to start up as quickly as possible (at least 2, 4 are better)
- If you don't mind a slower startup you could throttle the CPUs down below 4

See: <https://spring.io/blog/2018/11/08/spring-boot-in-a-container>

# Conclusions (2)

## Throughput

---

- Every application is different and has different requirements
- Using proper load testing can help to find the optimal configuration for your application

# Conclusions (3)

## Other Runtimes

---

- CRIU Support for OpenJDK and OpenJ9 is promising
  - Spring is going to support it in Spring Boot 3.2 / Spring Framework 6.1
- GraalVM Native Image is a great option for Java applications
  - But build times are long
  - The result is different from what you run in your IDE
- Eclipse OpenJ9 is a great option for running apps with less memory
  - But startup times are longer than with HotSpot
- Depending on the distribution, you might get other interesting features
  - Oracle GraalVM Enterprise Edition, Azul Platform Prime, IBM Semeru Runtime, ...

# Conclusions (4)

## Other Ideas

---

- Using an Obfuscator like ProGuard
- App CDS (Class Data Sharing)
- Importing `AutoConfiguration` classes individually
- Using functional bean definitions
- Spring Context Indexer (removed from Spring Boot 3.2 onwards)
- More JVM tuning (GC, Memory, etc.)
- Project Leyden

# A Few Simple Optimizations Applied

```
1  def fib(n):  
2      if n < 2:  
3          return n  
4      return fib(n-1) + fib(n-2)  
5  
6  def fib2(n):  
7      if n < 2:  
8          return n  
9      new, old = 0, 1  
10     for i in range(n-1):  
11         new, old = old, new + old  
12     return old  
13  
14  def fib3(n):  
15     fib_dict = {0: 0, 1: 1}  
16     def fib_inner(n):  
17         if n not in fib_dict:  
18             fib_dict[n] = fib_inner(n-1) + fib_inner(n-2)  
19         return fib_dict[n]  
20     return fib_inner(n)  
21  
22  def fib4(n):  
23     fib_list = [0, 1]  
24     for i in range(2, n+1):  
25         fib_list.append(fib_list[i-1] + fib_list[i-2])  
26     return fib_list[n]  
27  
28  def fib5(n):  
29     fib_iter = iter(fib4(n))  
30     return next(fib_iter)
```

# A Few Simple Optimizations Applied (1)

---

- Dependency Cleanup
  - DB Drivers, Spring Boot Actuator, Jackson, Tomcat Websocket, ...
- Bellsoft Buildpack
- JLink
- JVM Parameters (java-memory-calculator)
- Spring AOT
- Lazy Spring Beans
- Fix Spring Boot Config Location

# A Few Simple Optimizations Applied (2)

---

```
sdk use java 17.0.8-librca  
  
mvn spring-boot:build-image  
  
docker run -p 8080:8080 \  
-e spring.aot.enabled=true \  
-e spring.main.lazy-initialization=true \  
-e spring.data.jpa.repositories.bootstrap-mode=lazy \  
-e spring.config.location=classpath:application.properties \  
-t spring-petclinic-optimized:3.1.5-SNAPSHOT
```

Build	Image	Startup	Initial RAM	Throughput	RAM	50%	75%	90%	99%	99.90%	99.99%
